

# Digital Humanities

DIGITAL HUMANITIES FOR MEDIEVAL PHILOSOPHICAL SOURCES

## 7. Representation of source apparatus in TEI

conf. dr. Mihai MAGA

Babeş–Bolyai University, Cluj–Napoca  
Master in Ancient and Medieval Philosophy

2<sup>nd</sup> semester, 2023–2024  
HME2415/07

<https://www.dhcluj.ro/dhm/>

- 1 Ontologies and trees
  - 2 Describing the elements of a textual reference
  - 3 Other types of references
  - 4 Attaching the references
-  Homework 9

**tree** abstract data structure that simulates a hierarchical arborescence (see in *Course 3*: **root**, **parent**, **children**)

- can be conceived as a tree: a text (chapters, subchapters...), a bibliography (author, work...), a text corpus etc.

**ontology** (in information science) definition of types, properties and relations which exhaust the entities of a domain

- the definition of all classes, attributes and relations of the objects from a text corpus represents an ontology or a model

**class** = typology to which the object belongs

**attribute** = type of property of the object

**relation** = rapport with other object types

```
<rdg cause="homeoteleuton" wit="#MsAA01"/>  
    class      attribute            relation
```

The sources and textual references are described as bibliographic elements.

**<listBibl>** parent element for a bibliographic list

(may appear in header in **<sourceDesc>** or after the text body in **<back>**)

**<bibl>** parent element for a bibliographic indication

**xml:id="** *unique identifier*

**<author>** author of the source (simple or structured with  
**<name>...**)

**<title>** title of the source (simple or structured)

**<publisher>** publishing house

**<editor>** name of the volume editor

**<pubPlace>** publishing place

**<date>** publishing date

**<biblScope>** reference scope (e.g. pages, chapter)

**<...>** other properties (see **TEI Guidelines**)

## TEI-XML

```
<listBibl>
  <bibl xml:id="bibl001">
    <author>Aristoteles</author>
    <title>Metaphysica</title>
  </bibl>
  <bibl xml:id="bibl002">
    <author>
      <name>Stephen Ramsay</name>,
      <name>Geoffrey Rockwell</name>
    </author>
    <title level="a">Developing Things: Notes toward an Epistemology of
Building in the Digital Humanities</title>
    <editor>
      <name>Matthew K. Gold</name>
    </editor>
    <title level="m">Debates in the Digital Humanities</title>
    <publisher>University of Minnesota Press</publisher>
    <pubPlace>Minneapolis,
      <country>USA</country>
    </pubPlace>
    <date when="2012">2012</date>
    <biblScope unit="pp" from="75" to="84">75-84</biblScope>
  </bibl>
</listBibl>
```

**prosopography** person list, optionally with biographic data

- uses the elements `<listPerson>`, `<person>` etc.

**geography** geographic locations list

- uses the elements `<listPlace>`, `<place>`,  
`<geoDecl>`, `<geo>` etc.

**chronology** historical events list

- uses the elements `<listEvent>`, `<event>` etc.

The references may appear in the text or, more often, they are separately edited and referenced based on the unique identifier.

## TEI-XML

```
<TEI>
  <teiHeader><!-- ... --></teiHeader>
  <text>
    <body>
      <p>
        <name ref="#Aug">Augustinus</name> scribit <title ref="#DeCiv">De civitate</title>
        postquam <ref target="#a410" type="event"><name ref="#Alar">Alaricus</name>
        ceperit <place ref="#Rom">Romam</place></ref>.
      </p>
    </body>
  <back>
    <listPerson>
      <person xml:id="Aug">
        <persName>Augustinus</persName> <addName>Hipponensis</addName>
      </person>
      <person xml:id="Alar">
        <persName>Alaricus</persName> <genName>I</genName> <roleName>rex Visigothorum</roleName>
      </person>
    </listPerson>
    <listPlace>
      <place xml:id="Rom"><placeName>Roma</placeName> <geo>41.90 12.45</geo></place>
    </listPlace>
    <listEvent>
      <event xml:id="a410" when="410"><label>Anno 410 Roma ab Visigothis capta est</label></event>
    </listEvent>
    <listBibl>
      <bibl xml:id="DeCiv">
        <author ref="#Aug">Augustinus</author> <title>De civitate Dei</title>
      </bibl>
    </listBibl>
  </back>
  <text>
</TEI>
```

- The references are attached with the aid of the unique identifier (`xml:id="` ).
- The call to the unique identifier is a local identifier (prefixed with `#`) or an external `URL` (partial or full).
- The unique identifier may contain letters, digits (but not in the first position), some special characters `( . - _ )`.

```
<span xml:id="id_01"></span>          <ptr target="#id_01"/>  
  
                                <ptr target="sources.xml#id_01"/>  
  
                                <ptr target="http://example.com/sources.xml#id_01"/>
```

Identify the sources from the following text and encode it in TEI with a bibliographical list and links:

Quia intellectus habet duas operationes: scilicet unam qua format quiditates, in qua non est falsum, ut dicit ARISTOTELES in III *De anima*; aliam qua componit et dividit; et in hac etiam non est falsum, ut patet per AUGUSTINUM in libro *De vera religione*, qui dicit sic: “nec quisquam intelligit falsa”. Ergo falsitas non est in intellectu.

Praeterea, AUGUSTINUS in libro *LXXXIII quaestionum*, quaestio 32: “omnis qui fallitur, id in quo fallitur, non intelligit”. Ergo in intellectu non potest esse falsitas.

Item ALGAZEL dicit: “aut intelligimus aliquid sicut est, aut non intelligimus”. Sed quicumque intelligit rem sicut est, vere intelligit. Ergo intellectus semper est verus; ergo non est in eo falsitas.

THOMAS DE AQUINO, *Quaestiones disputatae de veritate*, Q. 1, art. 12
